**Production Grows by 30 Percent for Data Centers Delivered
Due to Increased Preference for Modular Data Center Solutions**

NEW YORK (June 17, 2013) – Growing industry acceptance and preference for modular data center solutions due to the [ease of construction](#) and low prevalence for unforeseen costs has resulted in a 30 percent increase of production capacity for [Data Centers Delivered](#)'s Kingston, ON manufacturing facility. Further validation of the company's efforts include 14 MW of work it has secured for over the last 12 months.

Powered by Epsilon Industries, Data Centers Delivered offers customers the best of both worlds – the customization, larger size, flexibility and aesthetics of a field-built data center facility with the speed, and cost-containment of a containerized data center.

The company has made several strategic investments to facilitate demand, including: hiring additional production, design and engineering staff; increasing factory production space and; upgrading manufacturing equipment and technology systems.

“The market has realized the ease to which customized, modular data center solutions can be constructed and commissioned,” said Chris Wiederick, principal, Data Centers Delivered. “The ability to be up and running in a matter of weeks has resulted in exciting growth for Data Centers Delivered and we will continue to expand our resources as customer needs mandate.”
